

Cirrato for macOS Quick Guide

Note: *To install Cirrato, you need to have local administrator rights on your computer.*

Installing Cirrato Drivers

1. To install Cirrato Drivers, click Install Cirrato Drivers.pkg

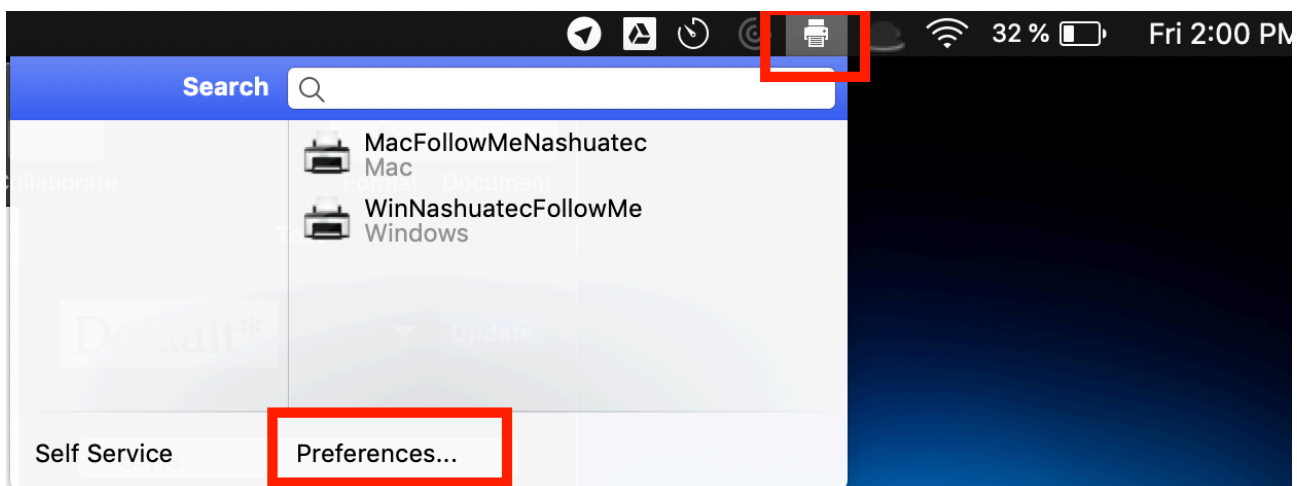

Installing Cirrato

1. To install Cirrato, click Install Cirrato Program.pkg.
2. Restart your computer!

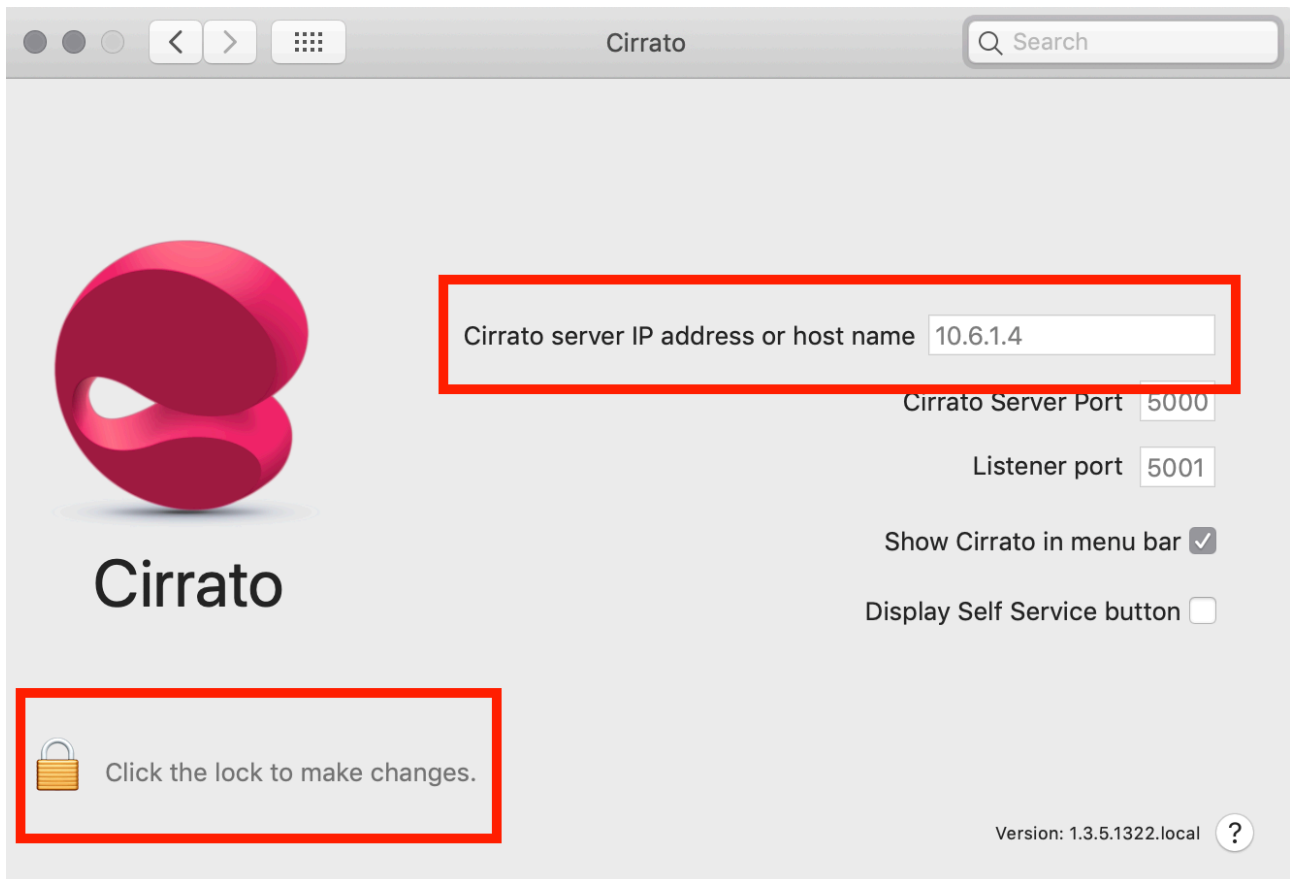

Using Cirrato and installing printers

When Cirrato has been installed, the client appears as a printer icon in your menu bar. Click the icon to expand your Cirrato user interface.

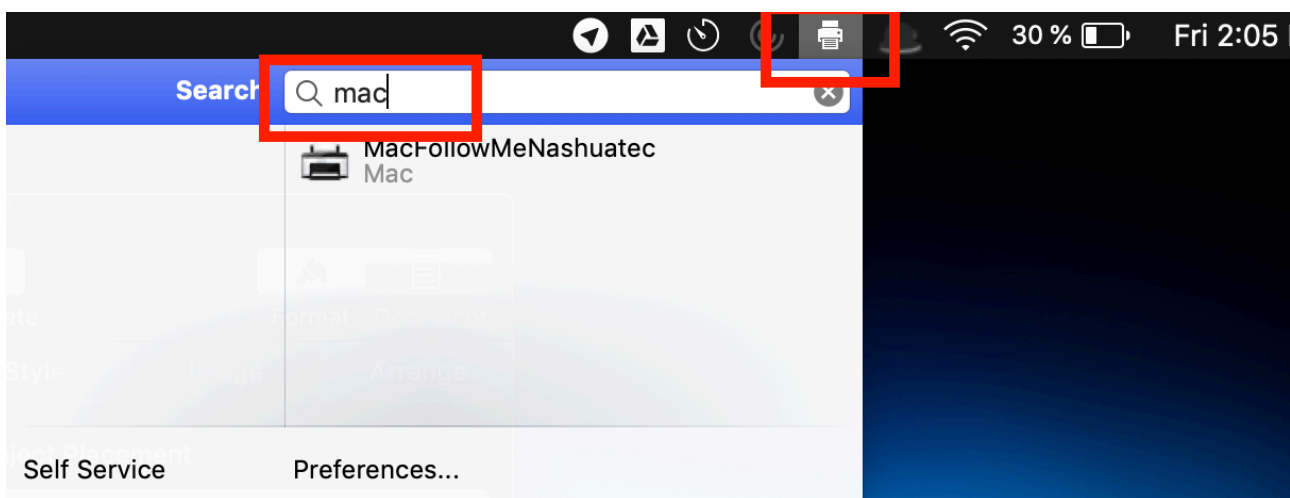

1. Click on Preferences

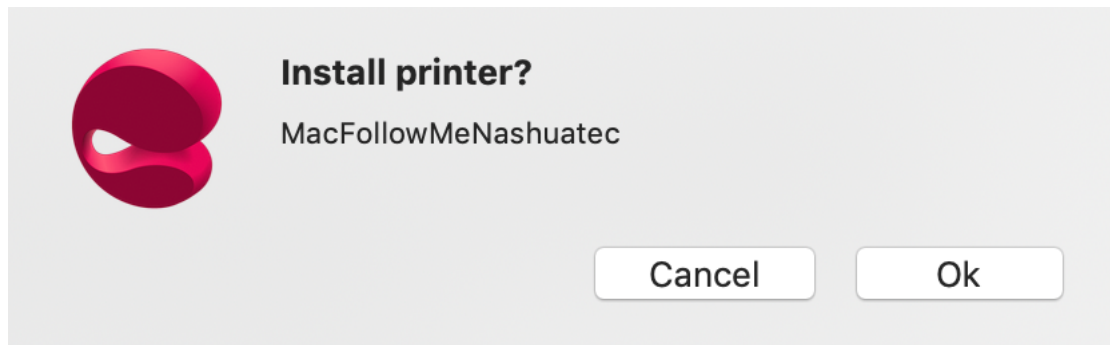

2. Click on the Lock in the corner and type in your credentials.
3. In the “Cirrato server IP address or host name” - Type in the following; 10.6.1.4

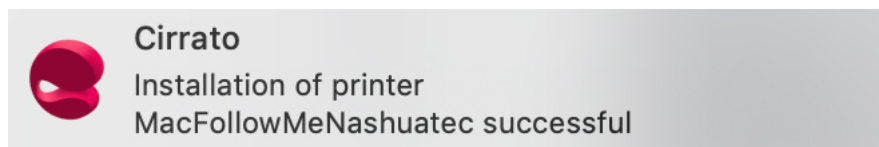

4. Click on the lock again
5. Go back to the Cirrato interface and search for “mac”.

6. Install the printer that shows up.

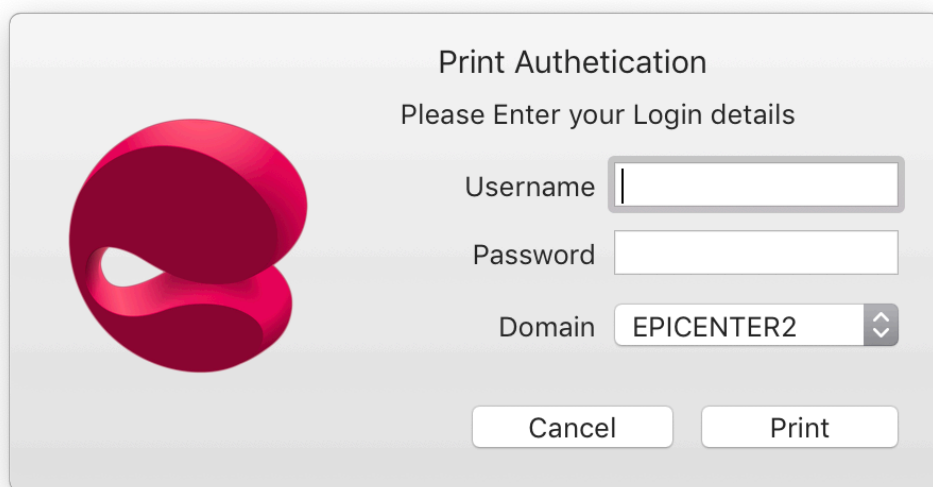

You will get a notification message as the following picture displays.

Using the Printer!

When you use the printer for the first time you will have to authenticate yourself using your username which you can find on the the Epicenter webpage where you downloaded this PDF guide.
This will occur every time that you restart your computer.

Registering your card/tag to the Printers

Instructions on how to register your card-pass/tag will be printed from the printer that you're using when you put it against the reader. Just follow those instructions and you'll be all set.

Cirrato Self Service

There is a Self Service center in the Cirrato. Search for <http://10.6.1.4/Cirrato/LoginPage.aspx> in your browser URL. You'll need your credentials which you can find on the the Epicenter webpage where you downloaded this PDF guide. The Cirrato website will take you to an extra tool where you can monitor all of your current printing jobs and the history of your printing jobs.
